

SERVICE AND SPARE PARTS PROVISION

The requirements for the maintenance of process plants have risen considerably over the last few years. The core tasks for operators in this respect are as follows:

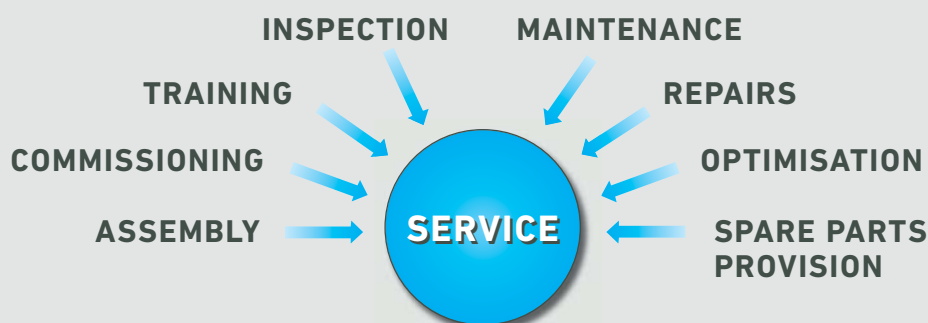

- How can plant security be achieved (in compliance with statutory requirements)?
- How can maximum plant availability be ensured?
- How can the service life of the plant be maximised?
- How can plant security and plant availability be ensured with minimum maintenance costs?

We want to help you with these tasks with our services

Whether you are interested in a customised service concept, or a plant suddenly needs repairing: The team at Schaub Umwelttechnik GmbH is the right point of contact in all cases involving lime, powdered activated carbon and soda plants. Our employees have been involved in the construction of hundreds of plants.

They are familiar with the details and in particular with the critical points of such plants. We are therefore able to respond to your requirements accordingly at all times. Personally, swiftly and with a view to finding a solution.

Our range of services comprises:

Inspection

The general condition of the plant is assessed. All safety-related parts such as the filter, air loosening system and cellular wheel sluice are checked for leaks and functionality. After the inspection you will receive an assessment of the condition of the plant and a recommendation for maintenance work or repairs to be carried out. In addition, we will also point out any potential for optimisation. We will be happy to provide you with an appropriate quotation for this.

Maintenance

Im Rahmen einer Inspektion festgestellte Mängel werden beseitigt. Verschleißteile werden ausgetauscht. An den relevanten Stellen werden Öl und Fette überprüft und ggf. nachgefüllt oder ausgetauscht. Behälter und Rührwerke werden innen auf Anbackungen und Verschleiß untersucht.

Repairs

If individual components fail, we will respond quickly. We will repair the components or supply the relevant spare parts.

Optimisation

Our employees are aware of the potential for optimisation in older lime plants in particular. We will be happy to prepare a concept for your plants to meet your needs.

Spare parts provision

We will offer the appropriate spare and wear parts for your plant: from standard parts down to specially produced individual parts such as worm gear shafts, stirrers and piping components.

Training

Our experts will provide your operating staff with training right from the point of commissioning of a new plant. We are also at your disposal later on if you require any assistance.

Our experts will be happy to analyse your need with you and draw up a customised service concept on the basis of this.
